

**Our onsite laboratory is accredited by UKAS to ISO 17025:2015 for the competence in testing to several key geosynthetic standards.**

The United Kingdom Accreditation Service (UKAS) is the sole national accreditation body for the United Kingdom, recognised by the government, to assess against internationally agreed standards, organisations that provide certification, testing, inspection and calibration services.

**Accreditation by UKAS demonstrates our competence, impartiality and performance capabilities, which we initially acquired in 1997 and maintained since then.**

UKAS accreditation uses criteria and procedures specifically to determine technical competence. Laboratory accreditation is carried out against the internationally recognised standard ISO/IEC 17025 to assess factors relevant to our laboratory's ability to produce precise, accurate tests and data including the technical competence of our staff, the validity and appropriateness of test methods, the suitability and maintenance of test equipment, the testing environment, sampling, handling and transportation of test items, and the quality assurance of test data.

You can find our most up to date Schedule of Accreditation on the UKAS website [here](#) and on our website at <https://www.geofabrics.com/downloads/>.
